Please refer to BhCall Service's FAQ section for more information Q: Python 3: Solving an equation I have this problem in a test and I do not know how to solve it. I have an equation: And it's asked to write a function that returns a value for the constants k and h, such that the equation holds. I have no clue how to solve the equation. I'm reading the book (I don't understand it yet so that may be a problem) and it didn't tell me how to solve it in the book, although the book has a solution with a table. The test is here: Thank you very much. A: I think you are supposed to use the Su = $\sqrt{2kh}$ substitution. using System; using System.Collections.Generic; using System.Linq; using System.Text; using System.Threading.Tasks; using Common.Logging; using ServiceStack; using ServiceStack.Builder; using ServiceStack.Common; using ServiceStack.OrmLite; using ServiceStack.WebHost.Endpoints; using HttpStatusCode = ServiceStack.WebHost.Endpoints.HttpStatusCode; using Api = ServiceStack.ServiceHost.Web; namespace CustomerManagement.API.Web { [Route("/Api/customer/
